6.【猜數字遊戲的提示/Master-Mind Hints】

實現一個經典「猜數字」遊戲。給定答案序列和使用者猜的序列,統計有多少數字位置正確(A),有多少數字在兩個序列都出現過但位置不對(B)。

輸入包含多組資料。每組輸入第一行為序列長度n(不超過 1000),第二行是答案序列。接下來是若干猜測序列。猜測序列全0時該組資料結束。n=0時輸入結束。(Page 3-17,UVa340)

輸入:	輸出(註):
4	Game 1
1 3 5 5	(1,1)
1 1 2 3	(2,0)
4 3 3 5	(1,2)
6 5 5 1	(1,2)
6 1 3 5	(4,0)
1 3 5 5	Game 2
0 0 0 0	(2,4)
10	(3,2)
1 2 2 2 4 5 6 6 6 9	(5,0)
1 2 3 4 5 6 7 8 9 1	(7,0)
1 1 2 2 3 3 4 4 5 5	
1 2 1 3 1 5 1 6 1 9	
1 2 2 5 5 5 6 6 6 7	
0 0 0 0 0 0 0 0 0 0	
0	

(註)

Output

The output for each game should list the hints that would be generated for each guess, in order, one hint per line. Each hint should be represented as a pair of integers enclosed in parentheses and separated by a comma. The entire list of hints for each game should be prefixed by a heading indicating the game number; games are numbered sequentially starting with 1. Look at the samples below for the exact format.
